

ABOUT US

We have been providing hot pressing services for brass and non-ferrous materials since 1934, supplying leading domestic and international companies.

Our process quality and production capacity are guaranteed by a Certified Quality System. Our reliability, standing and drive have made us the ideal flexible partner for both small-sized companies and large multinational corporations.

MAIN APPLICATIONS

- AUTOMOTIVE
- FIRE PROTECTION
- COFFEE MACHINE COMPONENTS
- HEATING ELEMENT COMPONENTS
- GAS AND LIQUID PIPING SYSTEMS AND FITTINGS
- REFRIGERATION AND CONDITIONING
- FAUCETS FOR INDUSTRIAL AND DOMESTIC USE

OUR
PRODUCTION

BRASS PROCESSING TECHNOLOGY AND SOLUTIONS SINCE 1934

HOT PRESSING

We can meet all customer requirements with brass hot pressing using “presses” and “screw presses” with a capacity from 100 to 800 Tons, so that we can manufacture items whose weight ranges from 30 gr to 8 Kg.

All the types of brass can be used for our production, including corrosion-resistant brass, new certified alloys as requested for drinking water use, alloys with very low lead content or lead-free, but high performing also from a mechanical point of view.

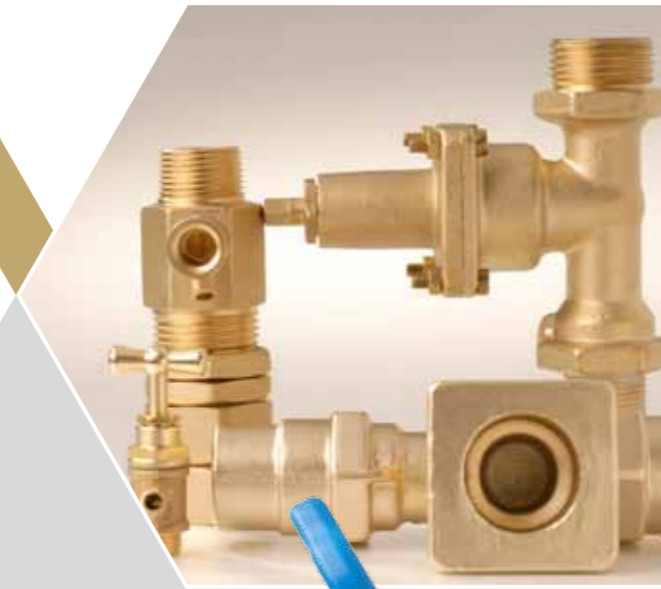

We follow our Customers from product design to finished product manufacturing.

MACHINING

We perform machining using TRANSFER with horizontal and vertical axis, equipped with different work units, mechanically operated or CNC.

We use 5-axis CNC machining to make high precision and complex products.

The best solutions can be provided in order to obtain excellent results on external treatment and finishing: SANDBLASTING, POLISHING, GALVANIC PROCESS, DELEADING PROCESS.

ASSEMBLY AND PACKING

We can assemble our products with other components upon request.

Our plus point is the supply of SEMI-FINISHED or FINISHED products, ready for retail.

We provide packaging operations as per our customers' instructions.
